DESCRIPTION

Pilot controlled spool valve, in five chamber design actuated by a Wandfluh proportional solenoid (VDE standard 0580). Wet solenoid in oil. Spool with precisely machined notches on control edges produce a progressive volume flow characteristic similar to proportional flow valves. The valve body, the covers and the solenoids are zinc coated.

FUNCTION

Depending on selected spool, the valve controls flow symmetrically or in meter-in or in meter-out mode. The spool is piloted by a proportional pressure relief valve. Set-up, function and interaction of main and pilot stage are shown with the hydraulic diagram. To control the valve Wandfluh proportional amplifiers are available (see register 1.13).

APPLICATION

High flow capacity and stiffness of the pilot system make this valve an ideal device for fast acceleration and deceleration, high speed, and sensitive adjustment of motion of an actuator. Application: Tooling machines, lifting and haulage systems, textile and plastic industry, mobile applications.
